(a) landmarks on $y = x^2$, $[0, 2]$
curvature quartiles
curvature median
arc-length midpoint
domain midpoint
$y = x^2$
x
(b) curvature-mass profile
cumulative mass $F(u)$
pure, $\beta = 0$
hybrid, $\beta = 1$
arc length
normalized arc length $u = s/L$
(c) discrete convergence
$|x_{1/2}^{(n)} - x_{1/2}|$
vertices n
x^2
x^3
$\sqrt{x}$
$1 - e^{-x}$
Gompertz $e^{-e^{-x}}$
$\propto 1/n$
